

Connor Filipovic

Senior iOS Engineer · Swift · SwiftUI · UIKit · 6+ Years Mobile

(615) 594-0403 · San Diego, CA · FilipovicConnor@gmail.com · ConnorFilipovic.com

SUMMARY

Senior iOS Engineer with 6+ years of experience shipping Swift and SwiftUI applications for consumer and enterprise audiences. Led a team of 8 engineers in a 25+ engineer native iOS/Android rewrite at a top-15 U.S. bank, delivering the new app to over 1.5 million daily active users. Experienced with MVVM architecture, Swift concurrency, Fastlane/GitHub Actions CI/CD, and the full App Store delivery lifecycle.

EXPERIENCE

Regions Financial Corp — Birmingham, AL Oct 2023 – Present

Software Engineer

- Co-led one of two iOS/Android rewrite teams (8 engineers) within a 25+ engineer initiative to fully migrate a legacy C# Xamarin app to native Swift/SwiftUI (iOS) and Kotlin (Android) serving over 1.5 million daily active users, completing the transition in just over a year
- Architected the iOS application following MVVM principles, leveraging Swift concurrency (async/await) and Combine for reactive data flows — resulting in improved load times and a significantly more maintainable codebase for a top-15 U.S. bank's consumer app used by 1.5M+ daily users
- Established GitHub Actions CI/CD pipelines for automated building, testing, and App Store distribution, delivering 1–2 production releases per quarter with consistent quality gates at scale
- Unlocked deeper per-platform analytics post-migration, enabling more informed product and engineering decisions across iOS and Android user segments
- Architected and deployed a feature flag management application using React/Next.js within an OpenShift environment, improving the team's ability to safely ship and control features in production

Sangoma — San Diego, CA Dec 2020 – Oct 2023

Software Engineer → Senior Software Engineer

- Led a team of developers building native iOS (Swift/SwiftUI) and Android (Kotlin) mobile applications using Agile/SAFe methodologies
- Designed and developed asynchronous iOS applications integrated with RESTful APIs, leveraging URLSession, Combine, and later Swift concurrency (async/await) for network and data layers
- Owned and maintained Fastlane and CI/CD release pipelines, implementing workflow optimizations that reduced deployment friction and unblocked project delivery
- Resolved escalated software issues from customer support and mentored junior engineers on Swift best practices, code review, and architectural patterns

GeoCue — Madison, AL Oct 2019 – Dec 2020

Software Engineer II

- Developed C# .NET web applications using ReactJS, Angular, and ExtJS frameworks
- Deployed and managed cloud infrastructure on AWS (EC2, Lambda, SQS, DynamoDB) within a Windows Server / IIS environment

Adtran — Huntsville, AL Aug 2017 – May 2019

Computer Science Co-op

- Automated hardware testing for the TA5000 and other Adtran products using Python and Pytest
- Built hardware test beds and CI pipeline scripts using Groovy and Robot Framework to enable developer-driven hardware validation
- Developed a command-line operating system for a networking hardware product in C

Autozone — Memphis, TN Aug 2018 – Dec 2018

InfoSec Intern

- Advised software teams on secure development practices and ran Fortify static analysis on internal and third-party software to identify vulnerabilities and recommend patches

Ramsey Solutions — Brentwood, TN May 2016 – Aug 2016

Java Intern

- Built a RESTful API using Java SpringBoot to power the backend of a web and mobile finance tracking application

SKILLS

iOS Core: Swift, SwiftUI, UIKit, Objective-C, Combine, async/await, Swift Package Manager, CocoaPods

iOS Tooling: Xcode, Instruments, TestFlight, App Store Connect, XCTest/XCUITest, Fastlane, GitHub Actions

Architecture: MVVM, MVC, Clean Architecture, Dependency Injection, Modular App Design

Android: Kotlin, Jetpack Compose, Java

Web & Backend: React, Next.js, Angular, .NET Core, Node.js/ExpressJS, PHP

Cloud & DevOps: AWS (EC2, Lambda, SQS, DynamoDB), OpenShift, Git

Other: Python, C/C++, Groovy, Robot Framework, Fortify

PROJECTS

PetMatch+ — SwiftUI Pet Adoption App

Swipe-based pet adoption app built in SwiftUI that aggregates local animal shelter data via a REST API and surfaces relevant results based on user location and preferences.

GarageSail — SwiftUI Garage Sale Finder

iOS app enabling users to create and discover local garage sales. Built on AWS Amplify for authentication, data storage, and location-based prioritization of nearby sales.

BattleConnect — University of Alabama Capstone (SAIC)

IoT battlefield situational awareness Android app built in collaboration with SAIC. Displayed real-time IoT sensor data and locations on a map for soldiers in the field.

EDUCATION

University of Alabama — Tuscaloosa, AL Aug 2015 – May 2019

B.S. Computer Science — Software Engineering Focus

AWARDS

- 2nd Place — Tuscaloosa Startup Weekend
- University of Alabama Presidential Scholarship — valued at \$110,000
- Dean's Engineering Excellence Scholarship — valued at \$6,000
